

- Tags: python, django Question: How to get my django app to work with python 3.7 I am new to django and have been trying to install it in my pc. I have installed python 3.7 together (UNLIKELY)

**companies\_true\_false.** This dataset was introduced by [Azaria & Mitchell \(2023\)](#); we obtained it via the project repository for [Levinstein & Herrmann \(2023\)](#) which also used the dataset. Example statements:

- ArcelorMittal has headquarters in Luxembourg. (TRUE)
- Exxon Mobil engages in the provision of banking and financial services. (FALSE)

**common\_claim\_true\_false.** CommonClaim was introduced in [Casper et al. \(2023\)](#). It consists of various statements generated by GPT-3-davinci-002, labeled by humans as being true, false, or neither. If human labelers disagreed on the truth of a statement, this is also recorded. We adapted CommonClaim by selecting statements which were labeled true or false with no labeler disagreement, then removing excess true statement to balance the dataset. Example statements:

- Tomatoes are not actually a vegetable. (TRUE)
- Contrary to popular belief, the platypuses are not venomous. (FALSE)

As these examples show, the statements can be ambiguous or of unclear truth value.

**counterfact\_true\_false.** Counterfact was introduced in [Meng et al. \(2022\)](#) and consists of factual recall statements. We adapt Counterfact by using statements which form complete sentences and, for each such statement, using both the true version and a false version given by one of Counterfact's suggested false modifications. We also append a period to the end. Example statements:

- Olaus Rudbeck spoke the language Swedish. (TRUE)
- The official religion of Malacca sultanate is Christianity. (FALSE)
